EXPERIENCE

Completed a six-month internship program with **DROIDSIZE TECHNOLOGIES PRIVATE LIMITED**

Tasks: -

- Reviewed development for hub and spoke model account topologies in AWS.
- Understood how Landing Zone works in cloud platform technologies.
- Worked on feature development of a security group module using Terraform for an AWS cloud platform.
- Built an AWS resources tracker using shell scripting.
- Built a Github API integration module using shell scripting.

Currently working as an intern with **The Techno Zenith Group**

Tasks: -

- Define a VPC with a specified CIDR block, creating two private and two public subnets. Implement route tables for public subnet traffic and NAT gateways for secure outbound traffic from private subnets.
- Develop a Lambda function designed to trigger via API Gateway.
- Utilize this Lambda function for secure analysis of credit card statements.
- Establish two security groups: one linked to Lambda and another associated with the VPC. This ensures secure communication between the Lambda function and VPC resources while controlling inbound and outbound traffic effectively.
- Create DynamoDB tables to securely manage credit card data and an S3 bucket for storing additional relevant information securely.
